Vishin - skewness

part A:

chart 1:- monthly Income (RS thousand)

<u>Vishin</u>	<u>Skew</u>
city	Right
village	Right
metros	left

mean vs median

mean > median

mean > median

mean > median.

chart 2:- Rainfall (mm)

<u>Vishin</u>	<u>Skew</u>
Station 2	left
Station 3	Right
Station 5	left

mean vs median

mean < median

mean < median

mean < median.

Chart 2 Deep per night (hours)

violin

skew

mean vs median

Year 4

left

mean < median

Year 5

left

mean < median

Year 2

right

mean > median

Chart 4 Battery life (hours)

violin

skew

mean vs median

Model S

left

mean < median

Model Q

Right

mean > median

Model P

left

mean < median.

Part B

B1) In chart 2, violin station 3 is not symmetric. Its tail is towards the right the median is a better measure of typical rainfall because it is less affected by extreme values.

B2) R code using ggplot2 to draw violin plots with the median shown.
