Website flow Sankey Design

a) **Calculate the three hidden flow**

Rule:- Incoming flow = outgoing flow

1) compare prices → order placed = 61
2) Author page → exit site = check node totals.
3) E-mail campaign → Author page = check node totals

5) **Calculations:-**

1) conversion rate = 1084/3970 × 100 = 27.33%
2) Largest flow into No order (Exit site = 1036 sessions.
3) Home → compare prices = 380/1008 × 100 = 26.99%

) **Design decisions**

1) Arrange nodes left to right.
2) Use consistent colours
3) Label flows clearly.
4) Highlight the longest drop-off

) **Node heights**

Home page = 7.04cm

Author page :- 6.245cm

genre page :- 6.565cm

(e) R Code

The first four source flows should be entered In the exact table order shown in the original diagram.

(f) Limitations:-

1) Too many crossing flows: use a bar chart
2) Tiny flows are heard to see use a table.
