For each chart below, answer: What is it trying to tell you? Do you trust it? Why or why not?

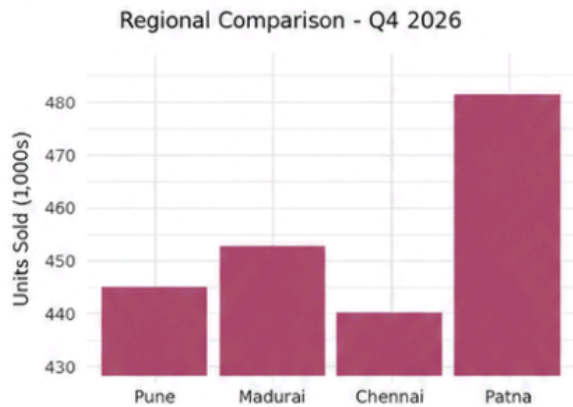

Chart 1

Budget Allocation by Department (9 categories)

Chart 2

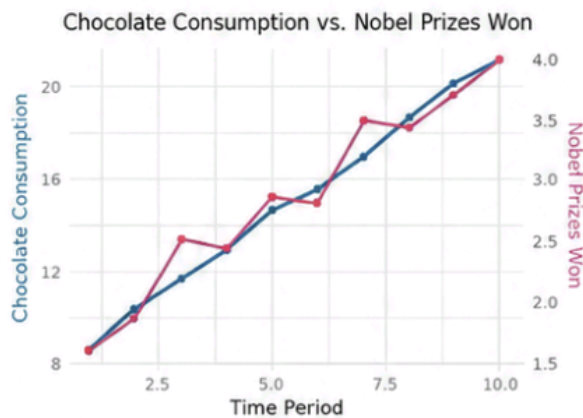

Chart 3

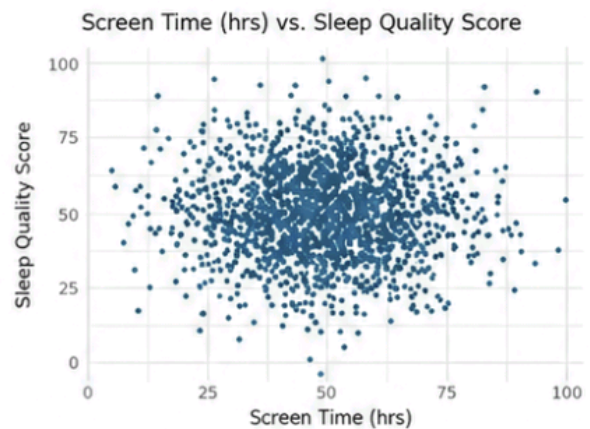

Chart 4

Your notes:

Chart-1

- * It is about Regional comparison - Q4 2026
- * It is a Bar graph, which is comparing Units sold in four different states.
- * It is comparing Pune, madurai, chennai and patna regions.
- * ~~the~~ this bar graph shows patna sold more no. of units of [480,000].
- * chennai have sold least no. of units of [440,000].
- * So chart-1 says that across 4 different states patna sold more no. of unit and chennai has sold least no. of unit.

chart 2

- * It is a pie chart.
- * It is about Budget Allocation by department in (9 categories).
- * In this large slice means a larger share of Budget.
- * pink has received larger share than compare to other.
- * If we see overall green is the largest share received department.
- * chart 2 tell us how total Budget distributed among different departments.

chart 3

- * It is about chocolate consumption vs Nobel prizes won.
- * It's comparing b/w two domains.
- * It is a line chart showing two different domains.

* Nobel prizes won also generally increase.

* The two lines appear to move in similar direction.

* The chart ~~pro~~ does not prove that eating chocolate causes more nobel prizes.

chart 42

* It is about screen time (vs) sleep quality score.

* it is scatter plot.

* Each dot represents an observation

* The x-axis represents screen time

* The y-axis represents sleep quality.

* The ~~more~~ more scattered point.

*
