

LAB EXPERIMENT RECORD

Department	AIML
Course Code / Course Name	DSA0601 / Data Handling and Visualization
Experiment	Data Visualization using R
Name	HYDERABAD MOHAMMED NAWAZ
Register Number	192325060
Date	29 September 2026
Day	Tuesday

SET 2: CUSTOMER FEEDBACK ANALYSIS

Dataset: Customer Satisfaction

Dataset: Customer Satisfaction

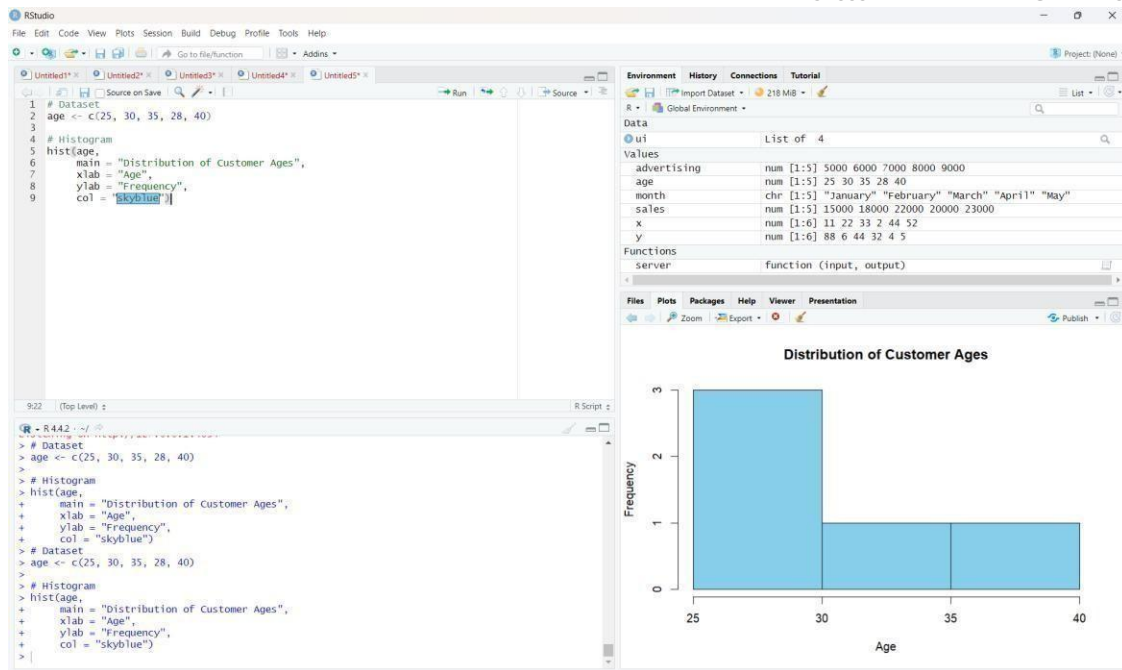

Customer ID	Age	Satisfaction Score
1	25	4
2	30	5
3	35	3
4	28	4
5	40	5

PROGRAM 1: Histogram of Customer Ages

Create a histogram to represent the distribution of customer ages. Label the axes and title the chart.

```
# Dataset age <- c(25, 30,
35, 28, 40)

# Histogram hist(age, main = "Distribution of
Customer Ages", xlab = "Age", ylab = "Frequency",
col = "skyblue")
```

Output 1: Distribution of Customer Ages

Observation: The histogram represents the distribution of the five customer ages in the given dataset.

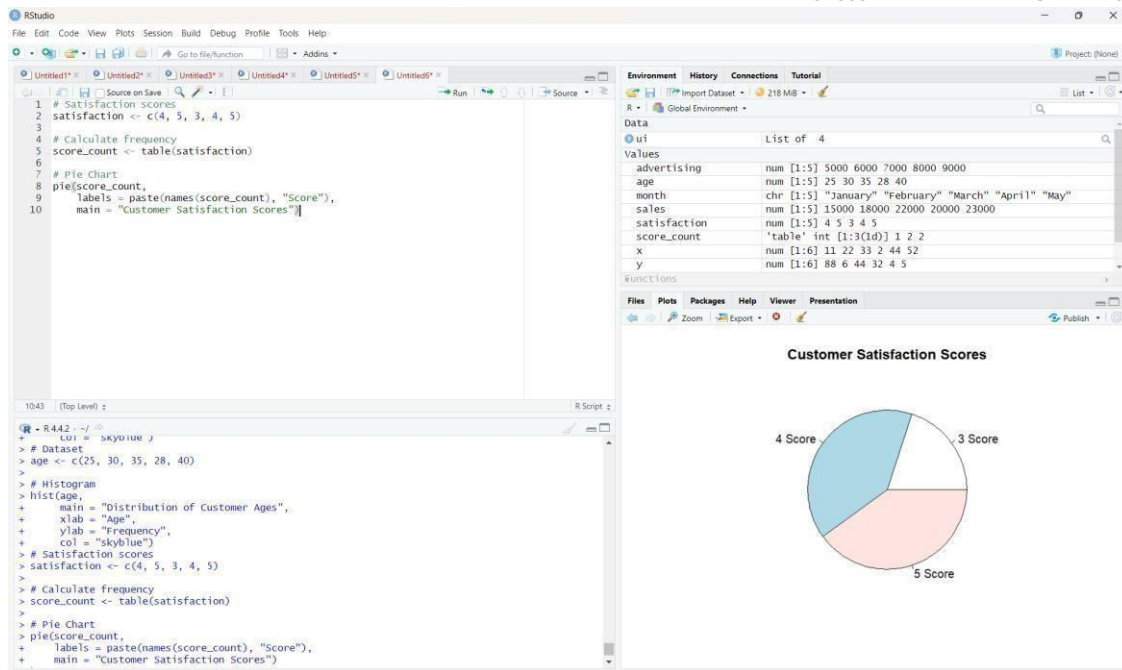

PROGRAM 2: Pie Chart of Satisfaction Scores

Generate a pie chart to display the overall distribution of customer satisfaction scores and include labels.

```
# Satisfaction scores satisfaction
<- c(4, 5, 3, 4, 5)

# Calculate frequency score_count
<- table(satisfaction)

# Pie Chart pie(score_count, labels =
paste(names(score_count), "Score"), main = "Customer
Satisfaction Scores")
```

Output 2: Customer Satisfaction Scores Pie Chart

Observation: Scores 4 and 5 each occur twice, while score 3 occurs once.

PROGRAM 3: Stacked Bar Chart by Age Group

Build a stacked bar chart to visualize the distribution of customer satisfaction scores by age group.

```

# Dataset age <- c(25, 30, 35,
28, 40) satisfaction <- c(4, 5,
3, 4, 5)

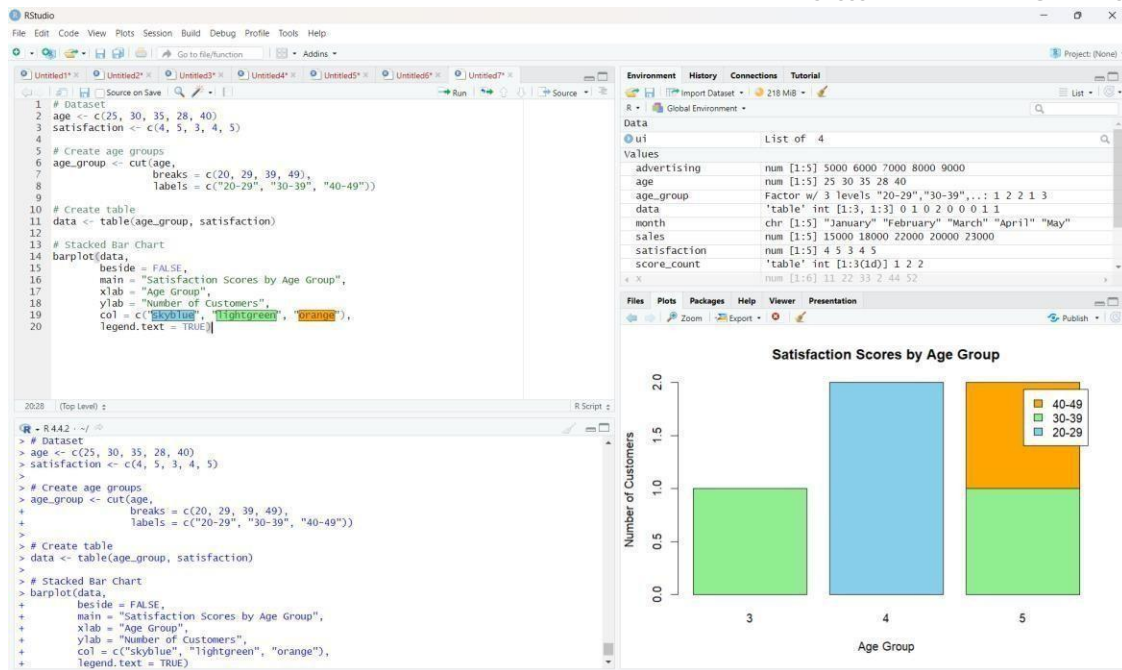

# Create age groups age_group <- cut(age, breaks = c(20,
29, 39, 49), labels = c("20-29", "30-39", "40-49"))

# Create table data <-
table(age_group, satisfaction)

# Stacked Bar Chart
barplot(data, beside =
FALSE,

main = "Satisfaction Scores by Age Group",
xlab = "Age Group", ylab = "Number
of Customers", col = c("skyblue",
"lightgreen", "orange"), legend.text =
TRUE)

```

Output 3: Satisfaction Scores by Age Group

Observation: The code creates three age groups and stacks the satisfaction-score frequencies for each group.

Note: The supplied RStudio screenshot is inserted exactly as captured, including its displayed x-axis labels.

PROGRAM 4: Word Cloud of Customer Feedback

Develop a word cloud from open-ended customer feedback to identify prevalent customer sentiments.

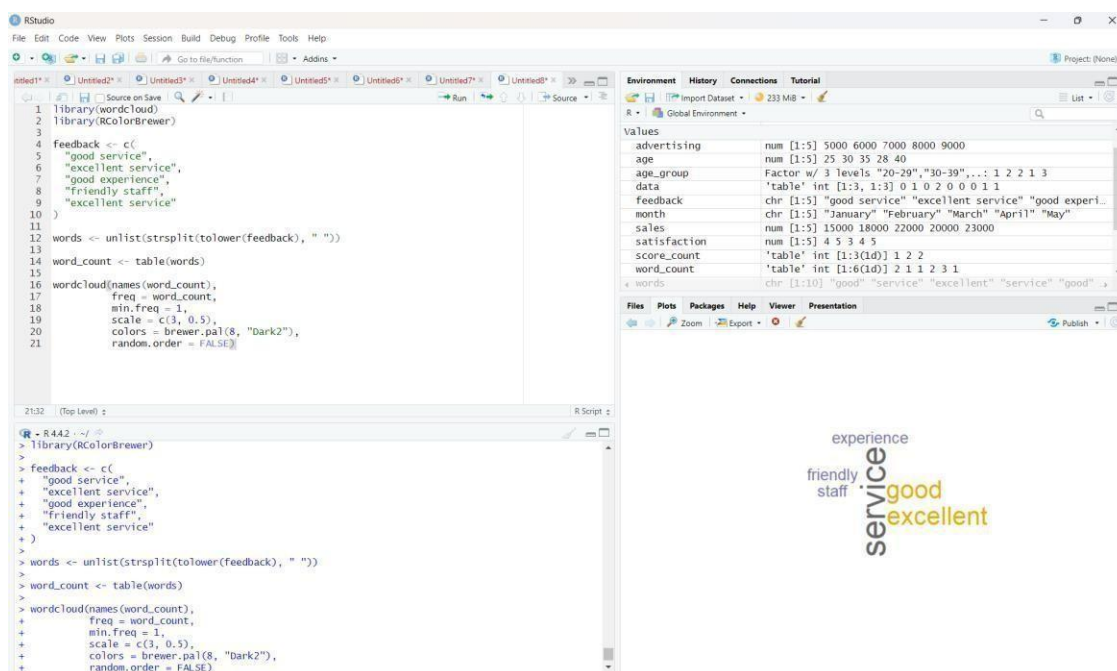

```

library(wordcloud)
library(RColorBrewer)
feedback <-
c(
  "good service",
  "excellent service",
  "good experience",
  "friendly staff",
  "excellent service"
)
words <- unlist(strsplit(tolower(feedback), "
"))
word_count <- table(words)

wordcloud(names(word_count), freq =
  word_count, min.freq = 1, scale
  = c(3, 0.5), colors =
  brewer.pal(8, "Dark2"),

random.order = FALSE)

```

Output 4: Customer Feedback Word Cloud

Observation: The word cloud highlights frequently occurring terms in the supplied sample feedback, including service, excellent, good, friendly, and experience.

Set 2 Procedure

1. Create vectors for customer age and satisfaction score.
2. Use `hist()` to represent the distribution of customer ages.
3. Use `table()` and `pie()` to display the satisfaction score distribution.
4. Create age groups using `cut()`, form a frequency table, and use `barplot()` for the stacked bar chart.
5. Prepare open-ended feedback text, count the words, and use `wordcloud()` to visualize frequent terms.

Set 2 Result

The customer satisfaction data was successfully visualized using a histogram, pie chart, stacked bar chart, and word cloud.
